

DevSecOps (development, security, and operations) is a set of practices which we can implement immediately for your agency. **TechSur Solutions delivers this service as a package that your agency can purchase today under an 8(a) STARS III direct award.** Using this BEST IN CLASS vehicle, your agency can award contracts of up to \$4.5 million on a non-competitive basis. This means a DevSecOps implementation is within reach – this fiscal year, with end-of-year money, all while meeting small business contracting goals.

What Does a DevSecOps Implementation Look Like?

DevSecOps is a collection of methodologies consisting of people, processes, and tools. A DevSecOps collection allows software teams to produce secure code faster. We have taken DevSecOps and packaged it into a collection of repeatable, verifiable operations. DevSecOps is a natural extension to DevOps - our goal is to make security a central component of the software development workflow, rather than retrofitting it later in the cycle. In today's climate, the "sec" is no longer optional for Federal agencies.

TechSur Solutions works with your existing technologies and contractors to accomplish DevSecOps goals at your organization, including:

- plugging in security during Continuous Integration and Continuous Delivery (CI/CD)
- ensuring each member of the workforce is accountable
- and highlighting vulnerabilities real-time.

DevSecOps Benefits

Solid Software Development & Automation

Lower Implementation Costs

Better Cross-Team Collaboration

Upgrade Agency Cultural Change to Best Practices

TechSur Solutions can work with hundreds of Small Business Administration (SBA) offices across the country and the Office of Small & Disadvantaged Business Utilization (OSDBU) small business liaisons to make this direct award purchase simple for you. TechSur provides multiple leapfrog service packs of highly-specialized tactical IT services available in a non-competitive avenue for rapid delivery and execution.
