

TechSur's ReadySetAI Playbook

From idea to impact. Compliant by design.
Human-centered by default.

What It Is

ReadySetAI is a step-by-step playbook that takes your organization from AI curiosity to measurable outcomes. It blends strategy, data, technology, security, and change management into a practical roadmap you can execute with confidence.

Why ReadySetAI

Strategy that sticks: We align AI to mission, KPIs, and a clear business case—so your first wins are meaningful, not merely novel.

Governance you can trust: NIST-aligned policies, roles, and risk controls (NIST CSF, NIST 80053, NIST AI RMF) with built-in transparency, fairness, and human oversight.

Built for the real world: A practical path from prototype to hardened production with IaC, blue green releases, monitoring, and runbooks, so value scales safely.

Adoption that lasts: The TEAM framework (Training, Engagement, Adoption, Mission) embeds AI into daily work and culture, not just into your tech stack.

Three Moves to Momentum

READY – Assess & Plan

Current state assessment: Snapshot of people, process, data, and technology – plus a gap analysis tied to mission outcomes.

Enterprise use case discovery: Identification and prioritization of use cases across the enterprise using scorecards for quick wins and strategic bets.

Data readiness & protection: enterprise inventory, quality scoring, and compliance baseline (GDPR/HIPAA/FISMA).

Signature outputs: Current State Assessment, Strategic Alignment Plan, Use Case Portfolio, Data Readiness Report.

SET – Build & Govern

Analysis of Alternatives: Build/buy tradeoffs using weighted scoring, WSJF, and risk-adjusted ROI to select the best path.

AI governance: Committee structure, roles, policies, and risk controls aligned to NIST AI RMF; focus on transparency, fairness, accountability, and human oversight.

Prototype pilot scale: Agile delivery with iterative user feedback; success metrics baked in from day one.

Data foundation: Standards, stewardship, and automated pipelines (assessment cleansing enrichment validation integration).

Signature outputs: AoA Decision Report, Data Standards & Pipelines, Pilot Results & Go Live Plan, AI Governance Charter.

AI – Operationalize & Grow

Production grade environment: High availability, private endpoints, secret management, and fullstack observability.

Security & compliance integration: Control mapping to NIST; alignment with CJIS/HIPAA/FISMA; evidence artifacts ready for audit.

Operate & optimize: SLIs/SLOs, hypercare, runbooks; FinOps guardrails (budgets at 50/75/90%, right sized models, autoscale, caching).

Signature outputs: Production Architecture & Runbooks, Security & Compliance Evidence Pack, Operations Handover Package, Cost & Performance Plan.

Clarity: A single, navigable playbook—no noise, just the moves that matter.

Confidence: Governance and compliance aren't bolted on; they're built in from day one.

What You Achieve

Control: A live risk register (data leakage, prompt injection, regulatory, budget) with owners and mitigations keeps surprises out of your roadmap.

Continuity: Your teams are enabled to run, improve, and expand AI, safely and sustainably.

Your Deliverables, Day 1 to Day Done

- Assessment & Alignment • Use Case Portfolio • Data Readiness Report & Catalog • AoA Decision Report
- AI Governance Charter • Data Standards & Pipelines • Production Architecture & Runbooks
- Security & Compliance Evidence • Operations Handover Package • Cost Optimization Plan
- Risk Register

Ready. Set. AI.

Turn high-potential ideas into secure, compliant, mission aligned results—faster.
